Utility Coordination  
Construction  
Inspection

Client:

City of Carmel

Contact:

Mike McBride  
City of Carmel  
(317) 571-2441

Constructed:

2006, 2010

Construction Cost:

\$6,425,000.00

## Project Highlights

- This existing two lane road was reconstructed as a two lane boulevard with 16' travel lanes. This reconstruction will improve traffic and pedestrian safety. This project included the construction of a 10' wide recreational path on each side of the street to improve pedestrian safety and connect to the existing path system in Carmel.
- There were three intersections on Shelbourne Road that were reconstructed as single lane roundabouts to improve traffic and pedestrian safety as well as improve the impacts that the high traffic volumes have on the environment. These roundabouts are located at 116<sup>th</sup> Street, 121<sup>st</sup> Street, and 126<sup>th</sup> Street.
